

Dr. Piyanuch Wuttisorn
Director General of National Statistical Office of Thailand
Candidate for the Governing Council of Statistical Institute for Asia and the Pacific

Dr. Piyanuch Wuttisorn is a Director General of Statistical Office of Thailand since October, 2021.

Dr. Piyanuch Wuttisorn's vision is to pursue the global statistical engagement where everyone contributes their full potential to attain the robust and sustainable statistical system in their own regions.

With such prospect, the key mission for the Governing Council is to consistently allocate the sharing and exchange of ingenious and insightful experts in the areas of statistical science for member countries. In addition, to enable the statistical operations of each National Statistical System in the region facing tremendous challenges in the era of change, Dr. Piyanuch Wuttisorn would like to recommend a concept of being resilient to the global trends, embracing and implementing digital and new technologies. Re-learn and re-skill are the keys for our statistical community to deliver relevant, comprehensive, accurate, and unbiased (politically untainted) statistical information as our public services with good governance.

In addition, if being elected to the Governing Council, Dr. Piyanuch Wuttisorn eagerly determines to continuously propel the implementation of the 2020-2024 SIAP strategic plan by supporting the development of the National Statistical workforce, not only through the institution's core training courses, but also the practicable international cooperation for learning, sharing and helping each other.

Such key linkages of collaboration could enrich the quality development of the Official Statistics of members and associate members to be in line with the international standards following SDGs in the region.

Dr. Piyanuch Wuttisorn emphasizes the importance of human resource development, especially the sharing of knowledge and expertise in each specialized area. This is to support the cooperation and the strength of each country's statistical system. Also, she encourages the collaboration with other development alliances to enhance and strengthen the statistical community at the sub-regional and the regional levels. She wishes to support the appropriate resource allocation, both tangible and intangible, for the development of our people in the region.

To achieve these goals, Dr. Piyanuch Wuttisorn strongly support and pursue eight principles for the election of the Governing Council.

1. improving course effectiveness
2. enlarging the impact of e-learning
3. encouraging supply and demand analysis
4. exploring the use of country expertise
5. mobilizing necessary resources to meet short-term demands
6. operating flexibly in delivery modalities and mobilization of expertise in highly specialized areas
7. better targeting and pursuing multiplier effects
8. delivering agilely through partnerships with national training institutions and other development partners
