Executive Summary v

Explanatory notes x

Country Profile Map xi

Acronyms and Abbreviations xii

Chapter 1: The Asia-Pacific disaster riskscape 1

Chapter 2: Reaching those left behind 28

Chapter 3: Investing to outpace disaster risk 56

Chapter 4: Technological innovations for smart resilience 84

Chapter 5: Resilience across the riskscape 105

Figures

Figure 1-1 Asia-Pacific regional riskscape (average annual losses) — volumetric analysis 5
Figure 1-2 Riskscape in numbers (AAL, billions of US dollars) 5
Figure 1-3 Distribution of AAL per capita and as a percentage of GDP 6
Figure 1-4 Fatalities from natural disasters, 1970–2018 7
Figure 1-5 Average deaths, people affected and economic losses from natural disasters 8
Figure 1-6 Disaster events in Asia-Pacific region — average per decade 9
Figure 1-7 Disaster fatalities in Asia-Pacific region — average per decade 9
Figure 1-8 Impact of global warming of 1.5°C in Asia and the Pacific 10
Figure 1-9 Exposure of economic stock to hydro-meteorological hazards 11
Figure 1-10 Concentration of exposed economic stock to geological hazards 12
Figure 1-11 Concentration of exposed population to climate-related hazards 13
Figure 1-12 Concentration of population exposed to seismic risks 14
Figure 1-13 The key characteristics of the disaster risks hotspots 20
Figure 1-14 Hotspots of flood hazard 21
Figure 1-15 Hotspots of drought hazard 21
Figure 1-16 Percentage of infrastructure at risk to multiple hazards 22
Figure 1-17 Hotspots of ICT infrastructure exposed to earthquakes and landslides 23
Figure 1-18 Airports and seaports exposed in tropical cyclone areas of the Pacific 24
Figure 1-19 Sand and dust storm risk corridors in Asia and the Pacific 24

Figure 2-1 Disaster impacts by sector 30
Figure 2-2 Disaster impacts on social sectors 30
Figure 2-3 Disaster impacts on productive sectors 30
Figure 2-4 Sectoral impact of disasters on selected countries (US$ million) 31

Figure 2-5 Impact analysis of disasters on social sectors and vulnerable populations 32
Figure 2-6 Proportion of population living in high-multi-hazard-risk areas 33
Figure 2-7 Overlaps of inequalities of income and disaster risk for select countries 34
Figure 2-8 Overlap of inequalities of opportunities and disaster losses for select countries 34
Figure 2-9 Projected Gini in 2030, with and without unmitigated disaster shocks 35
Figure 2-10 Odds of the wealthiest 20 per cent living in high-multi-hazard risk area 36
Figure 2-11 Percent reduction in extreme poverty rates in 2030 with and without disasters in selected countries (Baseline poverty rate=2016) 37
Figure 2-12 Countries with high Gini and high D-index, projected poverty rates in 2030 38
Figure 2-13 Overlap of inequality in opportunities and future disaster losses 38
Figure 2-14 Influence of drought exposure and vulnerability on human development index 39
Figure 2-15 Hydrometeorological and geological exposure and impact on deprivation (summary of regression analyses) 40
Figure 2-16 Lower odds of average birth size among children born in high-multi-hazard risk areas 41
Figure 2-17 Lower odds of access to prenatal and medical care for women in high-multi-hazard risk areas 42
Figure 2-18 Higher odds of agricultural poor living in high-multi-hazard risk areas 43
Figure 2-19 Education levels and vulnerability in high-multi-hazard risk areas in Bangladesh 44
Figure 2-20 Access to health care and vulnerability in high-multi-hazard risk areas in Bangladesh 45
Figure 2-21 Inequality of access to education in high-multi-hazard risk areas 46
Figure 2-22 Inequality of access to healthcare in high multi-hazard risk areas 46
Figure 2-23 Disaster displacement and people affected by weather-related disasters, Asia and the Pacific, 2008–2017 48
Figure 2-24 Hotspots of low HDI, high population density, and hazard risks 50
Figure 2-25 Hotspots of low HDI and land degradation in Central Asia 51
Figure 2-26 Hotspots of low HDI and land degradation in South-East Asia 51
Figure 2-27 The most vulnerable populations in the GBM basin 52
Figure 2-28 Mapping vulnerable communities and health facilities in Nepal 53
Figure 2-29 Mapping vulnerable communities and health facilities in Bangladesh 53

Figure 3-1 Impact of investments on poverty levels, 2016–2030, high disaster impact countries 59
Figure 3-2 Impact of investments on poverty levels, 2016–2030, moderate disaster impact countries 59
Figure 3-3 Projected number of people living in extreme poverty in 2030, with disaster risk 60
Figure 3-4 Impact of investments on inequality, 2016–2030, for high disaster impact countries 60
Figure 3-5 Average annual loss compared to annual additional investment to meet international norms 62
Figure 3-6 Breaking the link between disasters, poverty and inequality 79

Figure 4-1 Use of big data sources for disaster management, 2012–2018 86
Figure 4-2 Big data: four types of analytics for smart resilience 86
Figure 4-3 Data sources used for damage assessment, in percentage 86
Figure 4-4 Data sources used for predictive analytics, in percentage 89
Figure 4-5 IoT provides affordable earthquake early warning to communities in Japan 90
Figure 4-6 Tsunami warning system in Indonesia 90
Figure 4-7 Data sources used for predictive analysis that is effective in cyclone and flood forecasting, in percentage 91
Figure 4-8 Typhoon casualties and losses in China, 1987–2018 91
Figure 4-9 Ensemble prediction system: nested modelling for flood forecasting with longer lead-time 93
Figure 4-10 Predicted and actual rainfall in Sri Lanka, 24 May 2019 94
Figure 4-11 Index-based flood insurance 95
