Session 4.1: Fiji Country Presentation

Pacific Forum on Sustainable Development & Capacity Building Workshop for Pacific SIDS
14-15 December 2020

Climate Change and International Cooperation Division
Ministry of Economy
Lessons Learnt – Gaps and Challenges

• Strong willingness from all stakeholders to work together towards a common goal – sustainable, inclusive, resilient and low carbon future.

• Government agencies, NGOs, civil society, private sector and academia in Fiji are doing commendable work in enhancing sustainable development – but in silos.

• Important data sets are being collected by Government and non-government stakeholders but is not accessible under a ‘one stop shop’ solution – numerous data silos.

• Need to improve national coordination mechanism to guide progress towards SDGs.

• No structured means of collecting, verifying and interpreting data sets that can be translated into meaningful policy actions and implementable projects.

• Need for greater proactive involvement with non-state stakeholders to implement, monitor, evaluate and report on the SDGs.
Thank You
