Macroeconomic Performance and Outlook for Asia and the Pacific

Expert Group Meeting on
Boosting affordable and longer-term financing for governments

Session 3: Macroeconomic prospects, challenges and policies
1 November 2023

Shuvojit Banerjee
Kiatkanid (Wan) Pongpanich

Macroeconomic Policy and Financing for Development Division
United Nations Economic and Social Commission for Asia and the Pacific
Main messages

- Growth in Asia-Pacific in 2023 supported by domestic demand and services despite global headwinds and remains the fastest growing region

- Inflation subsided after a spike in 2022, but renewed price pressures seen towards the latter half of 2023

- Monetary policy remains tight and will have implications on consumption and investment

- Growth in 2024 is projected to slightly moderate on the back of a weak outlook in China and major global economies

- As fiscal space remains constrained, the ability of economies in Asia-Pacific to maintain developmental spending to support SDG achievement will be limited
Growth momentum in the first half in Asia-Pacific in 2023

- Growth in Asia-Pacific in the first half of 2023 broadly supported by China’s reopening, consumption and investment and tourism recovery, despite headwinds from developed economies

- However, more recent data shows slowing growth momentum in the region, impacted by China’s recovery losing steam with problems in its property sector

Source: ESCAP based on CEIC, accessed on 22 September 2023. Note: Subregional data are weighted averages using GDP in current prices of US dollars as weights. PMI >50 indicates improvement from previous month
Supply-side pressures waned in the early part of 2023

Renewed price pressures on food and energy from
- weather disruptions
- export bans to control agricultural supplies
- oil production cuts
- geopolitical events

Inflation subsided but renewed pressures are evident

Source: ESCAP based on CEIC, accessed on 23 September 2023. Note: Headline and food inflation rates are based on the median value of 27 countries, and 15 countries for core inflation.
Inflation remains above central bank targets in a majority of countries in Asia-Pacific

Central banks in Asia-Pacific are keeping interest rates elevated as rates in developed economies remain “higher for longer”

Source: CEIC, as of 23 September 2023. Note: Central bank interest rate decisions are based on policy rate data for 26 developing countries in the Asia-Pacific region.
Fiscal deficits have narrowed slightly since 2021 but lingering effects of the pandemic and high cost of living will require further fiscal support for SDG progress.

Debt servicing burden is rising amid high interest payments

- Ability of governments to support fiscal resources through debt is also under pressure due to growing debt stocks

**Debt levels in developing Asia-Pacific (as of 2023Q2)**

**Debt service (% of GDP)**

Developing Asia-Pacific outlook

- Slight moderation in 2024 on the back of outlook in China and major global economies
- Inflation projected to decline further in 2024

Source: ESCAP estimates and forecast as of October 2023.
Risks

- Extent of China’s economic slowdown due to weak property sector will be a risk to China’s own recovery and will hold back regional growth.

- Monetary policy stance of developed economies and persistence of inflation in the region will play a large role in shaping the region’s interest rate outlook and household consumption.

- The extent of the impact of El Niño on agricultural output, economic activities, food prices, and food security.

- Geopolitical tensions and geoeconomic fragmentation pose risks of trade disruptions, volatile adjustments in commodity prices, and declining sentiment.
Policy considerations

- Monetary policy balance between supporting development and maintaining macroeconomic stability
- Sustaining developmental spending amidst ongoing fiscal pressure
- Growing momentum for international support to fund climate action
Work in progress

- On growth: Alternative measure to supplement GDP, scarring and employment impacts, and applications of SEEA accounts in Asia-Pacific

- On impact of high inflation: on purchasing power, update of ESCAP poverty estimates, gender perspectives on inflation

- On indebtedness and financial fragilities: refining discussion on indebtedness and financial fragility, implications on households, small businesses, gender aspects of high interest rates and household debt
