1. South Asian Countries Participate in the 76th Commission Session of UNESCAP

BANGKOK, THAILAND, 21 MAY 2020 All the South Asian countries participated in the 76th Commission Session of UNESCAP under the theme "Promoting economic, social and environmental cooperation on oceans for sustainable development." Governments of Asia and the Pacific agreed to pursue coordinated and decisive actions, as well as reinforce regional and global cooperation in the fight against the COVID-19 pandemic and declared profound solidarity and vouched to provide unlimited support and technical assistance to those most affected, particularly in developing countries with weaker health systems and vulnerable populations. Prime Minister Sheikh Hasina of Bangladesh said while delivering her speech through a video message at the 76th Commission Session that although COVID-19 pandemic has severely affected the economy along with public health, it has a silver lining in the form of changes in global efforts to deal with climate change and growing competition for natural resources. The Under-Secretary-General and Executive Secretary of the Economic and Social Commission for Asia and the Pacific (ESCAP), Ms. Armida Alisjahbana, underscored that when addressing this health crisis, countries face an unprecedented dilemma: the need to balance measures to contain the pandemic against those for socio-economic recovery. To support countries in building back better, refocusing our work is necessary. She further highlighted three priority areas – helping economic recovery, protecting people and enhancing resilience, and restoring supply chains and supporting small and medium enterprises, and urged countries to align policies with environmental protection and climate action. The highlights of the country statements made at the APFSD by South Asian countries are reported later.

2. South Asian Countries Participate in the 7th Asia-Pacific Forum on Sustainable Development

BANGKOK, THAILAND, 20 MAY 2020 The 7th Asia-Pacific Forum on Sustainable Development (APFSD) was held virtually in Bangkok, Thailand with the theme "Accelerating action for and delivery of the 2030 Agenda in Asia and the Pacific". As a preparatory of the High-Level Political Forum (HLPF), the Forum provided a regional platform to support countries, particularly those with special needs, in implementing the 2030 Agenda. Among others, the Forum reviewed the five years of regional progress on SDGs, identified opportunities and entry points for accelerated action, launched the Asia-Pacific SDG Partnership theme report for the APFSD 2020 and discussed issues related to strengthening of follow up and review of the 2030 Agenda at the national level, subregional and regional levels. In preparation of the Forum a number of webinars were organized besides the subregional forums that were
organized by its subregional offices including the South Asia SDG Forum organized in Dhaka in December 2019. The opening session was also addressed by Ms. Amina Mohammed, Deputy Secretary-General of the United Nations, and Dr. Armida Alisjahbana, Executive Secretary of ESCAP, among other dignitaries. Highlighted speakers from South and South-West Asia included Ms Deki Yangzom, Peer Educatory-PEER, Bhutan, and Ambassador Samantha K. Jayasuriya, Ambassador Extraordinary and Plenipotentiary and Permanent Representative of Sri Lanka to ESCAP, who was elected as the APFSD Chair. The highlights of the country statements made at the APFSD by South Asian countries are reported later.

3. COVID-19 and South Asia: National Strategies and Subregional Cooperation for Accelerating Inclusive, Sustainable and Resilient Recovery

NEW DELHI, INDIA, 25 JUNE 2020 COVID-19 the global pandemic has evolved into an economic and a ‘human crisis,’ of mammoth proportions. South Asia, a subregion with nearly a quarter of world’s population but over a third of world’s people living in extreme poverty and hunger, has been impacted severely given the vast proportion of population living at the margins, fragmented coverage of social protection, pervasive informality in economic activities and employment, and wide gaps in public health infrastructure.

Prepared as a part of the UNESCAP Framework on Socio-Economic Response to the pandemic, COVID-19 and South Asia: National Strategies and Subregional Cooperation for Accelerating Inclusive, Sustainable and Resilient Recovery, the new UNESCAP policy paper finds that up to 132 million people could be pushed into extreme poverty in South Asia due to measures related to the pandemic, reversing the gains in poverty reduction of a whole decade, undermining the progress made by the subregion towards achieving the Sustainable Development Goals.

This paper, prepared by UNESCAP’s South and South-West Asia Office, argues that the objective of the policy actions should be not to go back to the status quo ante but to build back better by turning the crisis into an opportunity to create more equal, sustainable and resilient societies in South Asia, for the future, helping the subregion close the SDG gaps expeditiously. The paper goes on to identify some national strategies for a speedy, inclusive and sustainable recovery. Subregional cooperation in South Asia, whether bilaterally as well as within the frameworks provided by SAARC, BIMSTEC, BBIN, and UNESCAP, could usefully supplement the national actions in addressing the challenges posed by the pandemic and related measures. It outlines some areas of mutually beneficial subregional cooperation.

4. UNESCAP-EIF Project launched in Bhutan to build capacity of e-Commerce capacity of Women-led MSMEs

THIMPHU, BHUTAN, 4-5 FEBRUARY 2020 ESCAP, in partnership with the Enhanced Integrated Framework (EIF) and Royal Government of Bhutan, held a national consultation with more than 60 policymakers, MSME representatives and other stakeholders in Thimphu in line with the launch of the ‘E-Commerce Capacity Building for Women-Led MSMEs in South Asia’ project. The three-year project aims to enhance the knowledge and capacity of women entrepreneurs in the application of e-commerce platforms to expand their business exports and participate in local, regional, and global supply chains.
5. Policy Dialogue highlights Significant Sustainable Development Challenges Created by COVID-19 in South Asia

NEW DELHI, 13 MAY 2020 UNESCAP organized a virtual policy dialogue to discuss the sustainable development challenges created by the COVID-19 before South Asian countries based on the key findings of the Economic and Social Survey of Asia and the Pacific 2020. Moderated by Dr Nagesh Kumar, the dialogue had heads of prominent think-tanks among the panellists namely Dr Rathin Roy of the National Institute of Public Finance and Policy, Dr Sachin Chaturvedi of Research and Information System for Developing Countries, Professor Shaleen Singhal of TERI University. Mr Daniel Lee of Macroeconomic Policy and Financing for Development Division at UNESCAP headquarters made an introductory presentation. It was followed by a rich open discussion in which Professor Jyoti Chandiramani, Director of Symbiosis School of Economics, Ambassador Tariq Karim from Dhaka participated, among others.

6. Strengthening South Asia's Freight Corridors in the context of COVID-19

NEW DELHI, INDIA, 15 MAY 2020 Amid the COVID-19 pandemic, numerous countries have gone into the lockdown to contain the spread of the notorious virus that has created an unprecedented challenge to the international freight sector and exposed its weaknesses. The UNESCAP-SSWA office published a policy brief on the challenges in strengthening the freight corridors in the South Asia region amid the COVID-19 crisis to improve the resilience of the sector and seize the long-term benefit and development. Due to exposure to the crisis, the need for the region to speed-up its pace to utilize the cross-border rail network and digitalizing the cargo tracking and clearance procedures would be critical.

7. Bangladesh Confronts COVID-19 in the Path to Graduation
NEW DELHI, INDIA, 22 JUNE 2020  UNESCAP South and South-West Asia Office (UNESCAP-SSWA) partnered with the United Nations Resident Coordinator’s Office in Bangladesh to organize a webinar to discuss the way forward for Bangladesh’s potential LDC graduation amid the COVID crisis. Bangladesh has already fulfilled the graduation criteria in 2018. Still, the economic impact brought by COVID threatens to reverse a lot of economic progress and to create extra stress on the nation’s economy. The panelists discussed a wide range of socio-economic impacts and other challenges for Bangladesh that will impinge on its sustainable graduation process. The panelists included experts from Centre for Policy Dialogue, Dhaka; Bangladesh Rural Advancement Centre (BRAC), Bangladesh Garment Manufacturers Association, the World Bank Country Office, and UNESCAP-SSWA. A lively discussion involved participants from similarly placed LDCs in South Asia viz. Bhutan and Nepal.

8. South Asian Launch of World Economic Situation and Prospect
2020 Highlights Development Challenges

NEW DELHI, INDIA, 17 JANUARY 2020 Dr. Nagesh Kumar, Head, ESCAP-SSWA, presented the WESP report 2020 to the media and other stakeholders in New Delhi, highlighting the key findings for South Asian countries. According to the report, South Asia recorded a decade lowest growth in 2019. Specifically, he noted that India’s macroeconomic fundamentals remained strong as ever, and recovery in growth was imminent in the next fiscal year. Economic growth in South Asia is forecast to recover to 5.1 percent in 2020, after falling to a decade-low 3.3 percent in 2019. Yet, the global headwinds that are compounded by the credit crunch and other domestic issues may further cause setbacks to South Asia countries due to prolonged weakness in global economic activity, which causes significant drawbacks in achieving sustainable development targets. At the same time, the pervasive inequalities and the deepening of the climate crisis continue to fuel discontent in many countries of the world, South Asian countries included. The report also highlighted the urgent need to change the energy mix to address the climate challenge.

9. Seminar on Investing in SDGs highlights Investment Gaps in People, Planet, and Prosperity

NEW DELHI, INDIA, 20 JANUARY 2020 ESCAP-SSWA convened a seminar by Dr Hamza Malik of the Microeconomic Policy and Financing for Development Division of ESCAP on “Investing in SDGs: Thinking beyond GDP Growth” which highlighted that strong economic performance has not been people and planet-friendly and, therefore, thinking beyond GDP is needed to change policies and the mindset for SDGs effective implementation. According to ESCAP estimates, in South and South-West Asia, investment gaps in people, planet, and prosperity have risen to 10 percent of GDP. The seminar emphasized that estimating investment needs, along with a range of policy interventions, is the first step for countries to devise appropriate economic policies and financing strategies. Furthermore, the implementation of the SDG framework requires additional investments and policy actions such as comprehensive financing strategies and integrated policy frameworks and the need to revisit conventional approaches. Experts from a number of think-tanks participated in the discussion.
10. Bangladesh holds the Development Forum to harness Partnerships to Address the Implementation Challenges

DHAKA, BANGLADESH, 29-30 JANUARY 2020 Dr. Nagesh Kumar represented UNESCAP at the Bangladesh Development Forum (BDF) hosted by the Government of Bangladesh and delivered a statement. With over 700 delegates representing the Bangladesh government and various development partners engaged in dialogues and forged partnerships to address identified implementation challenges and to discuss issues related to financing for sustainable development goals to help Bangladesh graduate from the least developed countries’ group. The meeting found that Bangladesh would require $2-3 trillion by 2030 to meet the SDGs. Prime minister Sheikh Hasina inaugurated the Forum.

11. RIMES Council discusses Cooperation on Climate and Disaster Resilience in South Asian Countries

PATHUMTHANI, THAILAND, 20-22 JANUARY 2020 RIMES Council held its 11th Session at its base in the Asian Institute of Technology in Thailand. Dr Nagesh Kumar was invited to participate in the meeting and to discuss a partnership in enhancing climate and disaster resilience in South Asian countries. He made a presentation and briefed the Meeting on the discussion that took place on climate and disaster resilience at the Third South Asia SDG Forum organized by UNESCAP-SSWA in Dhaka in December 2019 and discussed the opportunities of leveraging the synergies with the South Asia Hydromet Forum.

12. COVID-19 and Future of Work

NEW DELHI, 20 APRIL 2020 UNESCAP joined a virtual dialogue on the impact of the COVID-19 pandemic on the future of work. In his remarks Dr Nagesh Kumar highlighted the impact of the pandemic on poverty, inequality and other SDGs. He also mentioned that COVID was likely to accelerate the digital revolution and large-scale automation using AI etc. which would lead to massive job losses that a youthful country such as India can ill-afford. For disincentivising the industry from going for automation, the government could impose a robot tax, revenues from which could fund social security programmes.
South Asian Priorities on Sustainable Development: Country Statements at the 7th APFSD:

Afghanistan:

A high-level policy level executive committee has been established to lead and provide oversight for the implementation of SDGs in Afghanistan. Several other technical and secretariat committees were formed to work on the SDGs, including setting the national targets and indicators as well as developing specific development programmes and projects in different sectors. Furthermore, a national document/normative framework is established for SDGs and approved by the Cabinet as a national development framework in the country with programmes and budgets that are aligned with the SDGs. Currently, the government is in the process of developing a macroeconomic and integrated modeling framework to guide the development activities in line with the SDGs. However, due to the COVID-19 outbreak and related lockdown measures, localization of SDGs at the provincial and local levels has been difficult. For the country to achieve the SDGs, international assistance is needed to assist Afghanistan to deal with the implementation of SDGs other than succumbing to political tensions and conflicts.

Bangladesh:

Being a densely populated country with the population of 160 million Bangladesh is trying hard to manage the COVID-19 pandemic like other countries of the world. Tackling COVID-19 requires countries to work together and help with each other on how to deal with the outbreak. The first flagship document of the government to address COVID-19 pandemic is the second five-year plan which started in 2016 and will be end in 2020 and is now finalizing the plan spanning from 2021 to 2025. Also, Bangladesh is sharing good practices with other Asia-Pacific countries identified in the GSDR 2019 report which pointed out six transformative areas Bangladesh has developed some good practices.

Likewise, Bangladesh has adopted people centered development approach and achieved the highest cumulative GDP growth globally in the last decade, increasing per capita income and reducing poverty. Bangladesh fulfilled all the three criteria for GNI, HDI and economic vulnerability index in March 2016. After 2017, the government has been preparing SDG’s action plan with new projects and programs; launched platforms to monitor implementation in terms of indicators while updating them; finalizing SDG financing strategy, including updating of the financing needs; holds national conferences on SDG implementation review; formed national data coordination committee; developed collaboration between UN and the government; and has approved 40 indicators for localizing SDGs.

Social participation has improved as shown in the budget allocation. The annual real GDP per capita and the manufacturing of value-added as a proportion of GDP has crossed the target set for 2020. Access to electricity is at 96% and the country is eying at 100% by 2021. Challenges include income inequality; need for public health care reinforcement; ensuring quality education in different states; climate vulnerability, etc. Bangladesh has an innovative practice that other countries can learn from and is also happy to learn from other countries to address their challenges. International cooperation is needed in finance and technology to facilitate smooth implementation of national security strategy, introduction of national voluntary pension schemes, integrated water resources management, innovative domestic resources mobilization and introduction of modern, commercial agriculture. Bangladesh aims to become an upper middle-income country by 2030, and a developed country by 2040.

Bhutan:

COVID-19 has killed many, causing economic drift and discrimination based on gender, age, race, digital divides and other human relations. Sources of income are shut down, hunger, poverty and food security issues are likely to be more prevalent due to COVID-19 pandemic. Also, the crisis resulting from the spread of COVID-19, has had a major effect on sustainable development targets, with health systems overwhelmed, businesses shut down, and students kept out of school. The poor and vulnerable have borne the brunt of the pandemic, and tens of millions are expected to experience extreme hunger and poverty.
India:

India is home to one-sixth of the humanity and recognizes the critical role and responsibility towards the success of the 2030 Agenda. With a view to making the Decade of Action very productive and decisive, India has taken several initiatives to meet the Goals and targets. India supports joint global action to address the COVID-19 pandemic and has extended medical assistance to several countries and operationalized the SAARC COVID-19 Emergency Fund with an initial contribution of USD 10 million. India’s response to the COVID-19 pandemic has also included USD 276 billion relief and economic stimulus package to provide comprehensive health coverage for front-line workers as well as direct cash transfers for the most vulnerable. The economic stimulus also embraces major reforms in agriculture and industry with long term consequences. India has used the response to the pandemic to forge and strengthen partnerships with both the public and the private sector. India has lifted 271 million poverty and reduced extreme income poverty from 21.2 percent in 2011 to 13.4 percent in 2015. 3. Considerable success have also been achieved in access, affordability and quality of sanitation, nutrition and health services; child and maternal mortality, and stunting.

With respect to ‘leave no one behind’ India has enshrined it in its Constitution and made social inclusion a cornerstone of the national development agenda which entails both the legislative and executive actions to ensure universal access to basic services and address the challenges faced by the vulnerable communities in nutrition, health, education, employment and social security. To improve gender equality, India has embarked on several schemes to ensure employability and economic participation of women. Such schemes include ‘Save the Girl Child, Educate the Girl Child’ which protects the girl child and support her welfare. Maternity benefits have been enhanced with greater health and nutrition care, maternal leave and conditional cash transfers. Over the last five years, women’s enrolment in long-term skill development courses as well as access to entrepreneurship credit has increased manifold.

India addresses the climate action and environmental sustainability agenda by developing clean and efficient energy systems and resilient urban infrastructure. It is also embarking on bio-diversity conservation and ecosystem restoration measures recording progress in full rural electrification, access to clean cooking fuel, energy-saving appliances that that has reduced CO2 emission annually by 38 million tonnes, etc. India has also launched the Coalition for Disaster Resilient Infrastructure and the International Solar Alliance to leverage global partnerships.

India aspires to become a USD 5 trillion economy by 2025 with an inclusive and sustainable growth trajectory. To meet this goal, India has introduced Single Goods and Services Tax regime, FDI liberalization, Insolvency and Bankruptcy legislation etc., to stimulate manufacturing, investment and infrastructure, innovation and entrepreneurship. Regarding regional connectivity, India has made this an integral part of its international economic initiatives. India embraces global partnerships and has always strived to build regional and international networks and will step up its efforts to increase cooperation and partnership.

Islamic Republic of Iran:

Iran’s response to COVID is interconnected with degradation of biodiversity and manifests of how human health is associated with plant health. Iran calls for a global recovery strategy, including creation of green jobs, fiscal and financial packages to achieve the SDGs. Financial and technological gaps can minimize the effect of harnessing the synergies on transformative change needed for implementing SDGs.

Iran is also using lessons from voluntary national reports to enhance its effort to leave no one behind and continue building national capacities for further evaluation. Iran believes that voluntary national reports need to be adopted at regional level. In recent years, Iran has invested above the regional average the provision of well-being for the public and improved the HDI, maternal and child mortality rates, agricultural index and adolescent literacy rates.

In the environmental front, Iran is facing land degradation, water scarcity, biodiversity loss, waste management, and climate change. The continuous conflicts in the region has also impurified decision-making, exacerbating the impact on environment, especially transboundary river and water management and pest’s invasion across the borders, threatening biosecurity.

Nepal:

Nepal has an SDG roadmap from 2016-2030 that includes SDG assessment, financing, and localization guidelines. The roadmap spells out the baseline target of SDG implementation and the financial needs. During the COVID-19 Pandemic, various high-level implementing committees have been set up, including the PM, the Vice Chairman of the National Planning Commission and other implementation and monitoring committees at subnational and local levels. During the four years of SDG implementation in Nepal, 2019 was the first assessment of SDG implementation in the country. Progress has been made in, for example, reducing extreme poverty, healthy sector, parity status, and reducing infant/maternal/child mortality. Challenges include multi-dimensional poverty, geographical features, and fragile environmental situation. COVID-19 has affected a lot of sectors, and it is a difficult time to cope with all the problems, including the financial constraint which will make it even harder to achieve the SDGs by 2030. The most significant challenges for implementing SDGs is localizing them at the province and local level, inadequate database, and weak coordination and monitoring mechanism. Nepal is looking to graduate from LDCs to a developing country in a few years, but COVID will affect the progress in this direction. To achieve SDGs in 2030, the Nepalese government has initiated a high-level committee to find out what impact COVID-19 have had on Nepal’s economic sectors. The result will be used by the government develop some specific guidelines for the recovery and in achieving SDGs by 2030.
Pakistan:

Pakistan believes that progress towards SDGs has been unstable. The Asia-Pacific region has limited success in reducing inequalities, promoting decent work and in ensuring inclusive economic growth and the building of strong institutions. While year 2020 marks the commencement of the Decade of Action, COVID-19 pandemic has created some setbacks in the socio-economic aspects and the achievement of SDGs. Its impact is most severe in the developing countries where precious resources have been diverted to mitigate and defeat the pandemic, squeezing further the fiscal space for progress towards the achievement of the SDGs. The complex and multifaceted challenges would require multipronged solutions where regional cooperation remains the key to achieving the 2030 agenda in region.

Pakistan has included the 2030 agenda into its national development policies and action plans. The national priorities are fully aligned with the aspirations of the 2030 agenda. Top priority areas include fostering social and financial inclusion, ensuring equal opportunities for the marginalized and disempowered, provision of educational opportunities and access to livelihood and social safety nets. The government has also taken deliberate actions to address gender inequality and ensure youth employment.

Pakistan fully supports the regional response to the global Decade of Actions and believe that it is imperative to address the financial challenges countries face in implementing the SDGs. With the COVID-19 outbreak, the fiscal space for nations is shrinking, making it harder for poor nations to set aside the necessary resources to address the outbreak. While countries take actions at national level, global cooperation and solidarity is key to achieve the SDGs.

Sri Lanka:

With COVID-19 pandemic continuing, most countries in the region will have to face an unprecedented level of socio-economic downturns. Multiple uncertainties and challenges in the social and economic spheres have rolled back progress in many countries. Developing countries are facing a collapse due to lockdowns and reductions in global demand and supply. Key economic factors that generate jobs are severely affected. Innovative and collaborative measures need to be taken by the region to boost socio-economic situations. It is imperative for the region to create new jobs to compensate the massive job losses and continue to support building of entrepreneurship skills, access to quality education and universal health care.

Sri Lanka has successfully prevented the spread of COVID-19 by imposing regulations, quarantine procedures, testing and treatments. The continuous investment on universal access to free healthcare has helped Sri Lanka to maintain a very low deaths and high recovery rates. A fund has been set aside to strengthen mitigation activities to control the spread of COVID-19 as well as social welfare programs. An Economic Revival Strategy is developed to identify new opportunities posed by the pandemic, including encouraging more digital communication system and online education. To address the environment, the resumption of human activities after the lockdown need to account for a reduction in carbon print. The post COVID-19 situation is an opportunity to gear for green and sustainable growth through more investment in research and innovations.

In the medium and long run, Sri Lanka will respond to socio-economic problems, including income generation, illiteracy with the aim to get back to sustainable growth and development. To achieve the 2030 agenda, Sri Lanka aims to improve its socio-economic resilience. Regional and global cooperation is essential to develop digital connectivity and electronic platforms in the education sector to face any pandemics of similar nature.

In strengthening institutional structures for realizing SDGs, Sri Lanka has enacted the legislative framework for SDGs (Sustainable Development Act No. 19 of 2017) and passed by the Parliament. The framework established a central focal agency (the Sustainable Development Council) to coordinate, facilitate, monitor and report on SDGs implementation. Also, the government established a ‘Parliamentary Select Committee for Sustainable Development’ to provide parliamentary supervision. Likewise, the government of Sri Lanka and UN signed the UN Sustainable Development Framework (UNSDF) 2018-2022, which provides the overarching framework for the work of the UN in Sri Lanka in line with the national priorities. It is now in the process of finalizing the policy and strategic framework for implementation of SDGs, through an inclusive mechanism of stakeholder consultations. Sri Lanka has also adopted the VNR and is willing to share its experiences and challenges to support the collective efforts in the region.

76th Commission Session: Country Statements

Bangladesh:

In her speech through a video message at the 76th Commission Session, Prime Minister Sheikh Hasina highlighted that although Covid-19 Pandemic has severely affected the economy along with public health, it has a silver lining in the form of changes in global efforts to deal with climate change and growing competition for natural resources. Ocean and sea are the last natural resources frontier contributing to the sustenance of humankind. However, environmental pollution has affected the food chain, and it requires an integrated response to solve the issue in a
sustainable, inclusive, and resources efficient way. Bangladesh has included a blue economy as part of the long-term national development strategy. Yet, Bangladesh has been implementing conservation programmes, using sustainable and eco-friendly technologies to protect freshwater and marine resources. She further emphasized that ESCAP could work with member States to address ocean issues by assisting in improving the capacity of policymakers through sharing knowledge, expertise, and transfer of technology from advanced countries; undertaking joint research on fisheries development and establishing networks/platforms to combat and eliminate illegal and unregulated fishing; and initiate mapping and management of resources, critical habitat, and other biodiversity protection.

The statement by Bangladesh highlighted the fact that oceans and the sea in APAC are the engines for global economic growth and development as they act as major conduits of maritime transport and global trade and commerce. With the climate change, economic and financial uncertainty, and growing competition of natural resources, transition into a sustainable, inclusive, and resources efficient paths to ease the pressure on the oceans and coastal waters and marine resources is urgently needed. Ocean’s health and productivity must be at the center of global efforts to eradicate poverty, strengthen food security, and build resilient economic growth. The marine food web is facing marine pollutants like marine litter/debris, wastewater, and excessive agricultural inputs. In order to use the ocean sustainably, maritime trade, container traffic, tourism, and renewable energy need to be put high on the agenda. In this direction, Bangladesh has banned the manufacturing and the use of single-use plastic since 2002.

In response to the presentation of the theme study, Bangladesh affirmed its commitment to implement 2011-2020 plan to achieve the SDGs owing to the challenges posed by COVID-19 that could weaken Bangladesh’s graduation from the LDC status. A meter rise in the sea level may drown 1/3 of the fertile land, requiring displacement of 20m habitats that might cause a significant blow to the GDP. The respondent highlighted the importance of defining a new economic doctrine that is balanced, considers technology, innovation, and entrepreneurship. To strengthen the institutions and human resources development, Bangladesh will need technical and financial assistance from advanced countries and international organizations.

Concerning the impact of the COVID-19 outbreak, Bangladesh affirmed that it had taken some short and medium-term measures to deal with the effects. Additional funds have been used in emergency healthcare, services, social protection programmes, the stimulus package for workers, and those most vulnerable. It is high time for all countries to intensify regional cooperation to overcome the impact of COVID through partnership and coordination. Sharing of expertise and knowledge is needed to manage the outbreak and the long-term effects for the people in the region. Also, countries need to mobilize regional resources to facilitate economic and social development. In this connection, Bangladesh has contributed USD1.5 million to SAARC COVID emergency plan. Bangladesh proposes establishing a SAARC research institute in Bangladesh to conduct studies and research on infectious diseases to prevent future public outbreaks in the region. SAARC also agreed to form a group of trade officials to facilitate the trade of essential and essential items and to link medical universities, academia, and research institutions for better coordination among parties.

Regarding the implementation of SDGs, Bangladesh is committed to implementing SDGs. A high-level implementation committee has been established under the PM’s office, and SDGs were included in the 5-year plan in 2016, and the current 5-year plan that nears its completion. Bangladesh welcomes the progress report, which identified six transformed six done well in the area of economic and social development and global environmental governance. Bangladesh believes that coordination, partnership, and the sharing experience and good practices among APAC countries should be the key to progress to the SDGs. The country is committed to implementing dedicated broadband internet connectivity via the implementation of the APAC information superhighway through the support of all member States.

India:

India highlighted that (1) data and statistics are crucial, and a standard methodology needs to be adopted across APAC for marine data collection of fish resources; (2) a sustainable utilization of marine resources management instead of a species based approach; and (3) marine pollution is much more than plastics pollution and the problem of agriculture and pesticides runoff from land, significantly affect coastal waters, which would also need to be addressed. About 95% of India’s trade is made via oceans. India places a strong commitment to the protection of the coastal and marine environment and economic development by using ocean-friendly technologies. The Envoy programme of India assessed the health of the ocean, ecosystem-based management of ocean resources and coastal vulnerability to climate change. Marine spatial planning and an ecosystem-based approach are applied for policy formulation. Also, India has held several meetings that provided training to delegates from the region in operational oceanography.

The observation network deployed in the Indian Ocean has helped the gathering of essential data on different parameters and accurately predict cyclones activities, thereby saving thousands of lives. The ecosystem in the region is under stress, such as coral reefs, mangroves, and seagrass meadows and under threat from over-exploitation and climate change. The blue economy should include sustainable harnessing of marine resources and must become a priority. India has collaborated with Malaysia, Bangladesh, Indonesia, Maldives, Myanmar, and Sri Lanka in a “Large Marine Ecosystem Project.” India believes that global action is needed to prevent marine debris and litter by 2025 and committed to eliminating single-use plastic by 2022. The Indo-Pacific Ocean Initiatives aims at strengthening the marine ecological conservation, capacity-building, resource sharing, scientific research networks/platforms to combat and eliminate illegal and unregulated resources, trade, and maritime connectivity. India will continue its role for closer coordinated and community-building efforts for healthy and productive ocean and coastal areas.

India has come up with three pre-emptive and proactive response to COVID-19. It has allocated USD276 billion for the economic stimulus package, provided comprehensive health coverage for frontline workers, and directed cash transfer to the vulnerable. India is ramping up the public health infrastructure and energize various economic sectors. India supports the joint global actions to address the COVID crisis as it has been at the forefront of global cooperation and involved in establishing the SAARC COVID emergency fund with an initial contribution of USD 10 million. It has shared best practices with other countries and transported essential medicines to 123 countries as an expression of global solidarity. In the virtual G20 summit, India underscored the need to put human beings at the center of global prosperity and cooperation. It also emphasized the need to strengthen and support share medical research and development to strengthen and reform inter-governmental organizations and institutions.

Islamic Republic of Iran:

Iran has contributed to the implementation of SDGs on disaster risk reduction and standardized a framework on disaster prevention, reduction, resilience, and recovery in the context of South-South cooperation under the terms
of the Commission resolution 71/11, which establishes a regional center for disaster information management. Iran has granted a building in Tehran for APDIM and provides financial support to allow the center to deliver on the Commission resolution 71/11.

Pakistan:

In 2017, Pakistan launched a marine ecosystem action plan to reduce marine pollution and to sustainably use marine resources, including sustainable fisheries/aquaculture and promotion of tourism. COVID-19 Pandemic has caused a considerable impact on developing countries, creating a downturn in economic activities and social setbacks. Noting that LDCs are suffering from debt burdens, Pakistan calls for the global initiative to debt relief on LDCs from the international community. About 1.2 trillion PKR is earmarked to provide a fiscal package to help the vulnerable as a tool to mitigate the impact of COVID and economic downturn. International solidarity is needed to ensure no one, nowhere is left behind.

Sri Lanka:

As an island nation in the Indian ocean, the issue of the ocean/sea has been of paramount importance for Sri Lanka. Sri Lanka has made commitments in (1) ensuring sustainable fisheries; (2) preserving livelihood; (3) prevention of marine pollution; (4) sustainable blue economy; (5) feasible navigation in the Indian Ocean; and (6) Maritime connectivity. Also, in 2018, Sri Lanka acted as the coordinator of the Indian Ocean Bream Association, Working Group on Maritime Safety and Security. The country has participated in initiating and hosting of multilateral engagements for the Indian Ocean. In its economic and development agenda Sri Lanka has included a blue-green economy as a focus and has a national policy that bans selected categories of PE since 2017 with the aim to reducing marine debris and litter.

Addressing the impact of COVID in the region, Sri Lanka fully supports closer cooperation within the region to minimize the impact of COVID. The country has contributed to the SAARC Emergency COVID Fund to alleviate the impact of COVID in the region. Networks were also established to share information, knowledge and expertise of health services to battle the pandemic. Sri Lanka believes sharing best practices, experiences and technology, and allowing medical supply access at affordable price would be an integral part of a regional collective response on the COVID-19 crisis.

Turkey:

Turkey recognizes the need to strengthen global cooperation to address global issues and will continue to contribute to the global responses, particularly during the time of a pandemic. It believes that with or without the pandemic, the global system is already facing a lot of challenges. The nation has taken strong measures in the healthcare system, including providing free universal health care and investment in healthcare infrastructures.

The Turkish government has provided free universal healthcare and made early investments in its healthcare infrastructures that have paid off during the pandemic by making it more accessible to people. In particular, the investment in health workforce and new hospitals prior to the pandemic helped the country to cope with the pressure of COVID-19 outbreak. The country has further witnessed new cases of COVID-19 slowing and discharged cases exceeding new cases. The healthcare system is still able to cope with the increasing pressure of COVID-19 pandemic. Turkey has responded to economic downturn by helping the households and businesses who are in need and paid special attention to most vulnerable and high-risk groups, including migrants, refugees, displaced person and elderly. As a part of their UN global humanitarian response, Turkey will continue to provide medical supplies to other countries.

SDGs IMPLEMENTATION PROGRESS

a. SGDs: priorities, actions and means of implementation
