

Future of work

Implications for promoting
inclusive and innovative
policies?

Major structural changes :

Innovation & technology

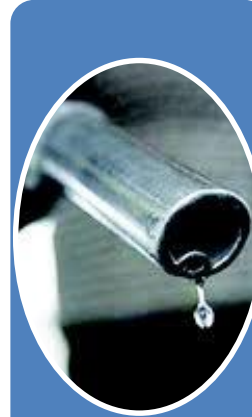

Demographic change

Gender composition of occupations & inequalities

Rising income inequalities

Scarce natural resources & climate change

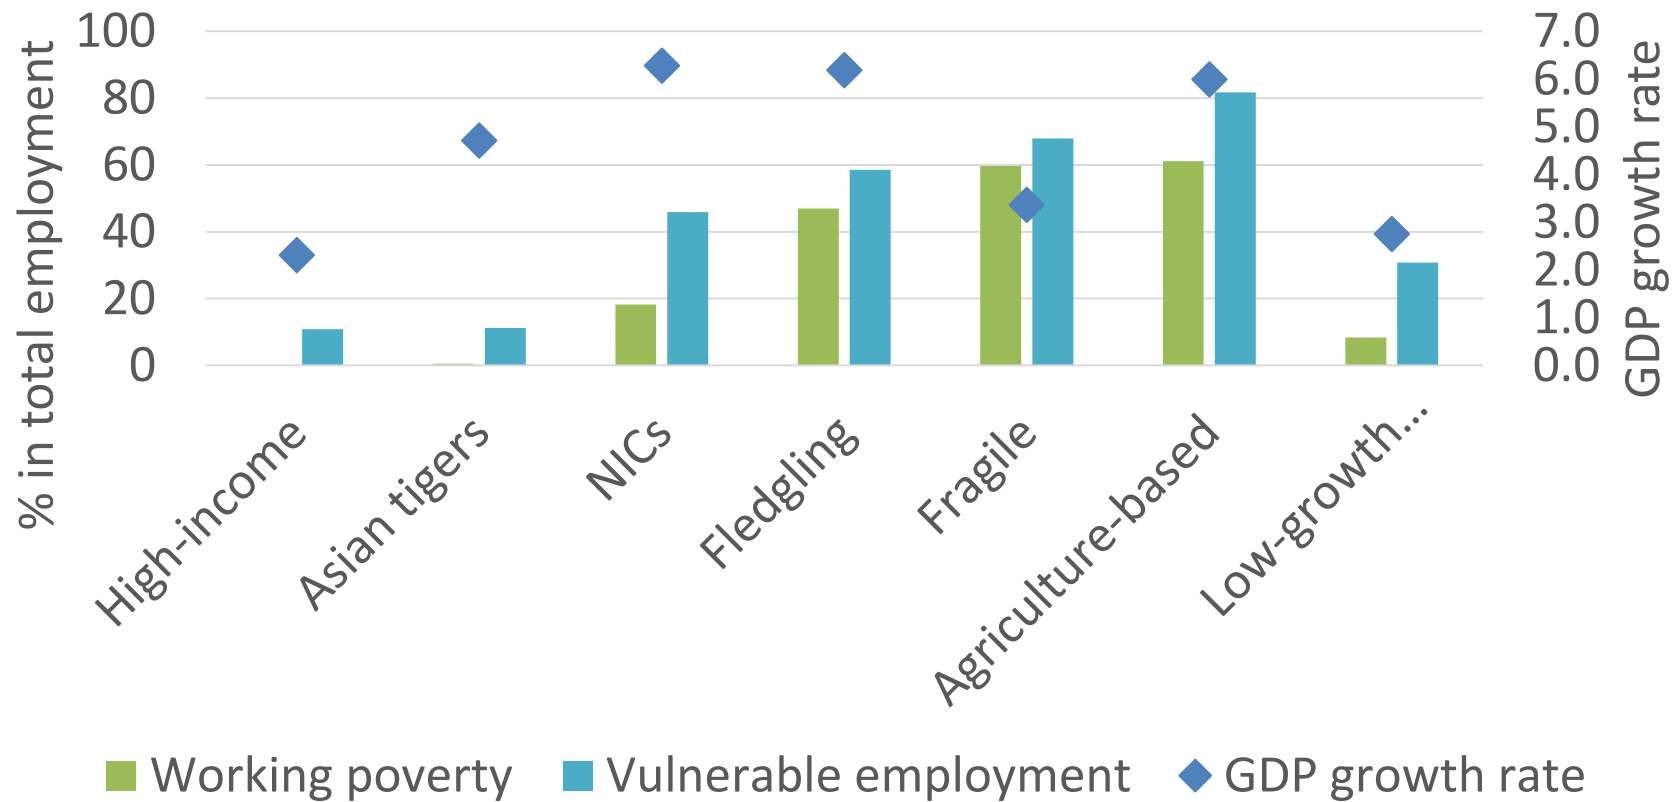

Transition to greener economies

Globalisation & fragmented production

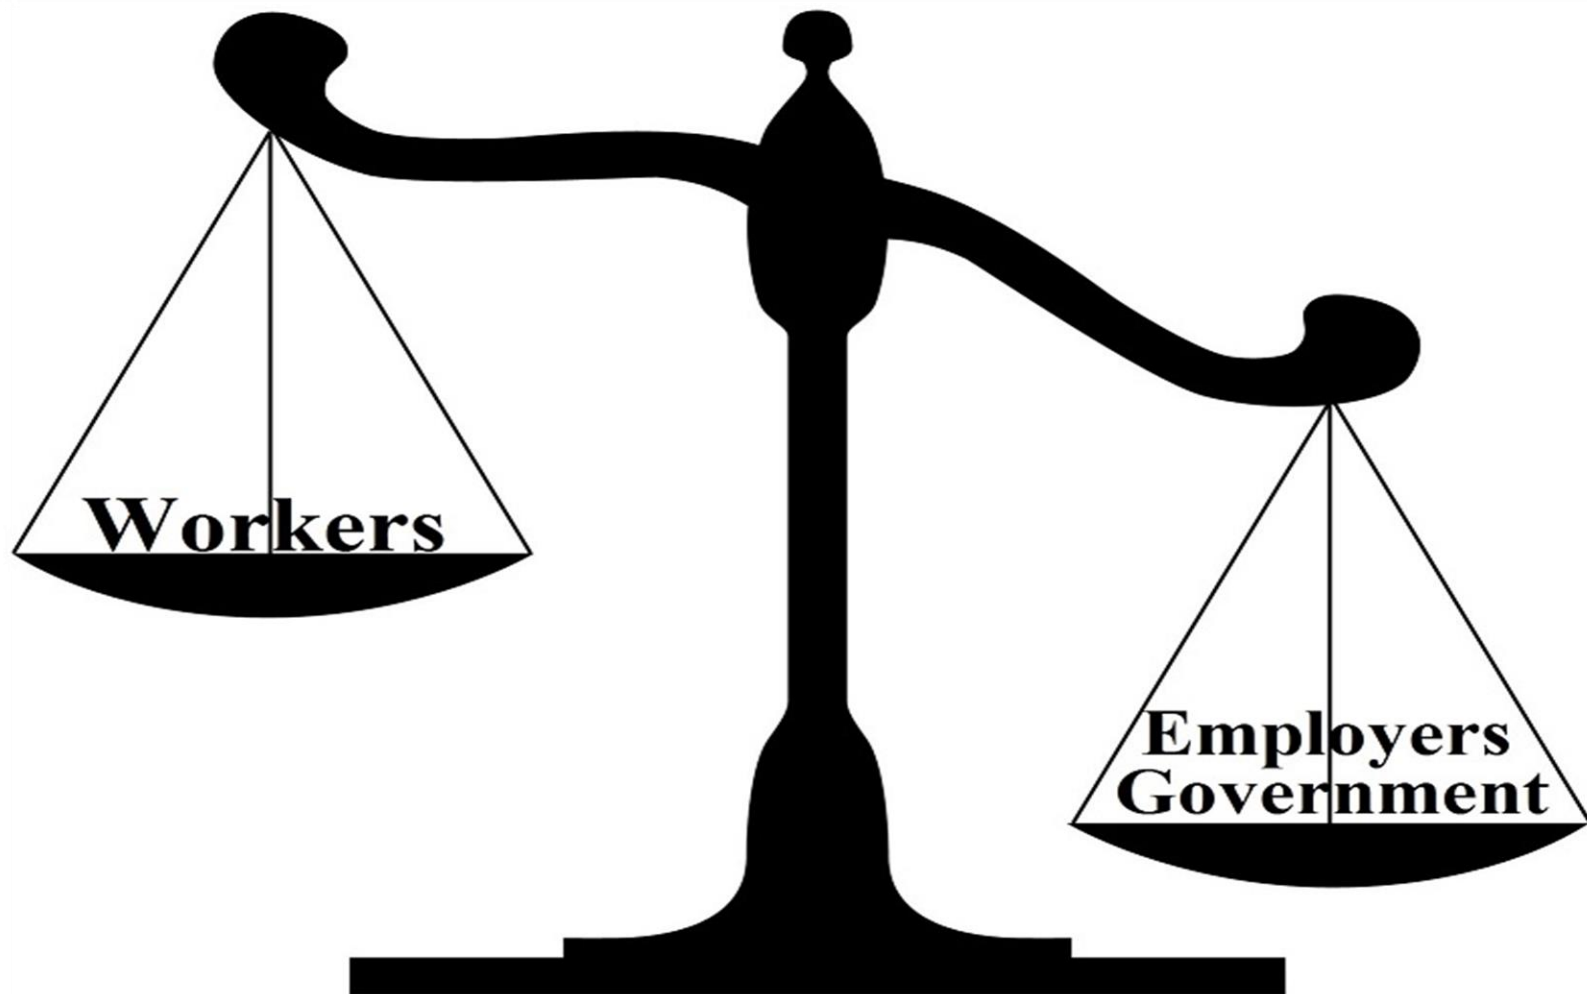

Why have strong economic growth records in Asia-Pacific not “killed” decent work deficits?

GDP growth rates, working poverty and vulnerable employment rates, average 2010-17, by Asia-Pacific country grouping

Working poverty and other elements of decent work deficits can reflect a mis-balance of power

Where do inclusive and innovative policies come for a “better” Future of Work?

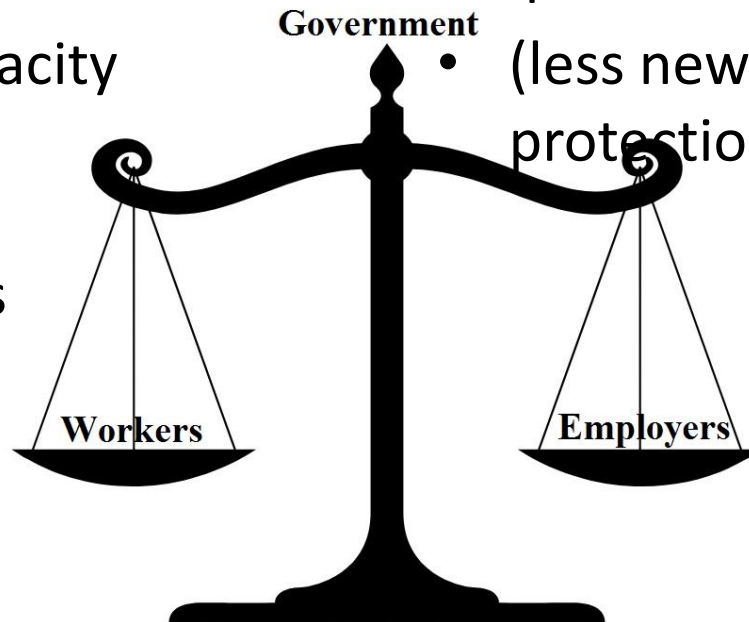

Examples

Accelerate the transition from informal to formal sector

- (new) research on e-formality (how technology can promote formalization)
- (less new) capacity building to for SMEs on good practices in worker registrations, benefits, etc.

Innovations in social protection

- (new) organizing crowdworkers with 'portable' social benefits
- (less new) advocating social protection floors

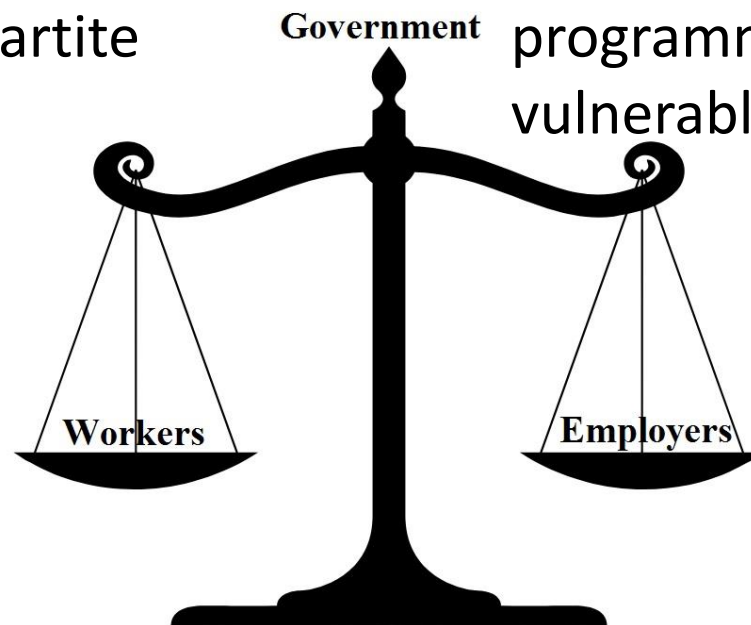

Examples

Improved labour migration governance

- (new) app-based information sharing for labour migrants
- (less new) tripartite dialogue for just migration policies

Promoting safety at work

- (new) app for labour inspectors
- (less new) OSH training programmes for workers in vulnerable occupations

International
Labour
Organization

DECENT WORK

A better world starts here.
