

Russia - Country Statement Item 2

Russia Federation supports the propose system of Global indicators. Corresponding to the agenda 2030, we understand that for many indicators of the 3rd level, we will need a lot of more work done. We also need to organize a coordinator process of data preparation at the national level especially providing for the principle, getting everyone in the picture. Statistic potential should be developed to the country as well because when we talk about new indicators we need more statistics surveys. We need to modernize the current system of statistical survey. We support the principle in the document and our delegations also support the whole concept of the 2030 as well as the framework of action which will be the basis of our work on improving our statistical potential.

On a whole, we support the recommendations and we also have particular attention to the detailed descriptions of every indicator. Also, we should prioritize data prepared at the national level because we can normally talk about international statistics when we manage to collect good statistical data within the country. Of course, big attention should pay to coordination of the process. Our success depends on the good development of the statistical system in the country. That is why need to improve the potential of the country.
