Thailand would like to propose the suggestion as follows;

Firstly, Thailand would like to draw attention on the sharing Internet non expediency. It is very important especially on the practical policy measures for the fight of COVID-19 to help better support countries in the region to go forwards and in this matter the practical policy measures related to the use of technology such as applications, artificial intelligence (AI) application, and solutions. This will be systematically disseminated so that the member States can learn and adapt.

Secondly, pay more attention to the soft side of the use of ICT technologies especially in this time which the use of ICT technologies has rapidly increased. And the important thing is digital literacy of the people which could help and safeguard to wisely use of technology and utilize technology appropriately.

Last but not least, Thailand would like to address on the real investment gap of digital infrastructure because we need to look seriously especially to tackle the gap of digital technology investment in the remote areas as to help them to access and reduce inequality and so that to provide better financing mechanism or even model that will help and tackle closing gap of digital infrastructure investment.

Thank you very much.
